

ABOUT THE CONFERENCE

IEC6 was held in Gaza, Palestine on October 25-26, 2016 at the main conference hall at IUG. It aimed to bring together all key players including architects, engineers, planners, professionals, decision makers and involved researchers and academics worldwide to exchange knowledge and experiences and to discuss the latest findings related to the topic of energy-efficient buildings. It also aimed to highlight this design and construction approach of buildings, and to contribute to the international trends towards more sustainable and environmentally-friendly built environment. In addition, the conference was an opportunity to explore new potential international cooperative works, strengthen existing relations, and promote new initiatives and partnerships.

The conference attracted high level papers presenting researches related to design and construction approaches, energy performance, monitoring, modeling and analysis, renewable energy technologies and applications, and policies, standards and management procedures to increase energy efficiency of buildings in order to save energy. It covered both new buildings as well as existing ones, with special focus on good practices towards conserving energy.
